SYLLABUS (Please read carefully)

Physics 13 is the second part of General Physics (General Physics II, General Physics I is taught in Physics 10). Physics 13 is an introductory course to physics, and it is meant mainly for students oriented for example towards the biological and environmental sciences, or pre-med students. Physics 13 is a calculus based course, but it requires a little less use of calculus compared to the course taken by engineering and physics majors (Phys 21). Although you are required to be able to understand calculus, especially while reading your textbook, you will be required to be able to use integrals and derivatives only in very simple applications. Subjects covered include (see below for more details): electromagnetism, waves, ray optics, interference, and an introduction to quantum-mechanics and nuclear physics (special relativity may be briefly introduced). The purpose of this course is to introduce these topics as well as learn about some of the principles underlying physics. Starting with simple problems, we will develop strategies for solving more complex ones.

Instructor
Dr. Paola M. Cereghetti
cereghetti@lehigh.edu
Office: LL 410
Office hours: I will be available Monday through Thursday in the classroom from 11:30am to 12:00pm. To schedule an appointment at a different time, please e-mail me, thanks!

Class Meetings
Monday, Tuesday, and Thursday from 12:00pm to 1:45pm; Wednesday from 12:00pm to 2:15pm.

Textbook
College Physics by Openstax College downloadable for free at: https://openstaxcollege.org/textbooks/college-physics/get We will cover about half of the book.

Class notes and reading assignments
Class notes will be handed out in class. Further reading the topics studied in class in the textbook and class-notes is highly recommended. This will facilitate considerably your understanding of the material. Because of the intensive nature of this course, some assigned material will be briefly presented in class, and you will be expected to learn it by doing homework problems.

Homework
Homework will be assigned every day. HW is meant to reinforce the material learned during the day in class, and is due the following day. Some HW problems will be covered in class before the time they are due. The homework grade will be calculated from the points you earn in the homework assignments.
Homework solutions and extra practice exercises
Homework solutions will be provided in class. Please make sure that you understand each problem that you have not been able to complete correctly. Practice packets (exercises with solutions) will be provided as a help to prepare for quizzes and final.

Work outside the classroom
This is a 3-credit class. It is standard practice that for every hour of class 3 hours are spent studying or doing homework. You can spread this time out over a few hours each day of class, on Fridays, and over the weekends.

Attendance
Since physics is an intensive subject, keeping up to date is essential. Consequently, you are expected to attend all classes and to do all assignments on time.

Quizzes and final exam:
There will be 4 quizzes, each one at the end of the week starting with the second week of the session. The final exam will be on Saturday, August 13, 2016, from 8:00am to 11:00am There will be no make-up for quizzes (see grading below). Quizzes and the final exam are closed book; you can prepare a one-sided equation sheet for each quiz and an additional one for the final exam. During the final exam, you will be able to keep 5 one sided pages of equations.

Grading:
Your numerical grade in the course will be determined as follows:

<table>
<thead>
<tr>
<th>Category</th>
<th>Weight</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attendance</td>
<td>10</td>
</tr>
<tr>
<td>Homework</td>
<td>20</td>
</tr>
<tr>
<td>4 Quizzes</td>
<td>20</td>
</tr>
<tr>
<td>Final Exam</td>
<td>20</td>
</tr>
<tr>
<td><strong>Total</strong></td>
<td><strong>70</strong></td>
</tr>
</tbody>
</table>

- In the final exam, you will find again the material from the 4 quizzes. If your performance in the final in a particular section is better than your performance in the corresponding quiz, your grade for that quiz will be changed to the average grade of the quiz and the corresponding section in the final.

- If you miss a quiz for a valid reason, the quiz grade will be taken from the grade of the corresponding section in the final exam.

Accommodations for Students with Disabilities:
If you have a disability for which you are or may be requesting accommodations, please contact both your instructor and the Office of Academic Support Services, University Center C212 (610-758-4152) as early as possible in the semester. You must have documentation from the Academic Support Services office before accommodations can be granted.

The Principles of Our Equitable Community:
Lehigh University endorses The Principles of Our Equitable Community [http://www.lehigh.edu/~inprv/initiatives/PrinciplesEquity_Sheet_v2_032212.pdf]. We expect each member of this class to acknowledge and practice these Principles. Respect for each other and for differing viewpoints is a vital component of the learning environment inside and outside the classroom.
